**Net Zero**

**Case Example:**

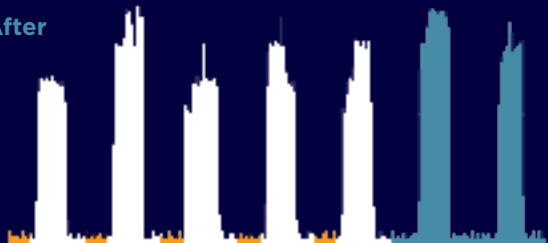

The below example shows unusually high electricity usage between midnight and 07.00.

We were able to identify a lighting timeclock had been incorrectly set. This was reported to the client's on-site contact so that corrective action could be carried out.

# PROFILE ALERTS

A fully supported interactive service designed to combat energy waste and other abnormal consumption. Helping organisations drive action at priority sites.

Our software will automatically detect unusual patterns of energy consumption from half-hourly data and issue email alerts to allow action to be taken. We combine this with a dedicated team who proactively follow up the highest priority issues.

**Creating Profile Targets:** We set appropriate consumption thresholds for each site based on historical data and other site information, such as opening hours or floor area.

**Monitoring Against Target & Detecting Exceptions:** Consumption for each meter is monitored and where it breaches target i.e. outside of threshold, exception alerts are automatically generated and emailed to a designated person allowing a rapid response to any significant deviation or overuse.

**Dedicated Support Team:** We contact the highest priority sites, providing site managers with support to reduce wastage and resolve costly issues. We provide visibility of anomalies via performance reports and regular reviews, allowing you to make informed decisions about the optimal energy saving initiatives for your portfolio.

Identifying energy waste quickly as well as proactively establishing areas for reducing energy consumption is essential for all energy users.

Supporting  
your journey to  
**Net Zero**

With our Profile Alerts service you get  
**optimum benefit:**

- Saves you time
- Reduce energy spend
- Expert review of alarms
- Dedicated support team
- Drive energy efficient behaviour

We can also help you collect, analyse and  
report on your utilities data.

**Services include:**

- Profile Alerts
- Metering
- Energy and Water Efficiency Audits
- Agreed Supply Capacity Review
- ISO 50001 Gap Analysis

# PROFILE ALERTS IN 5 SIMPLE STEPS:

### Automatic Alerts

Daily alerts are sent to site when a breach occurs. A weekly summary is sent to the energy manager and/or regional manager.

### Regular Reporting

High-level summary view of performance, providing the ability to drill down to half-hourly details

### Initial Set Up

Data capture and analysis of historical consumption and target setting.

### Priority Calls

Our dedicated Profile Analysts review your profile alerts and identify priority sites to be targeted for improvement.

### Annual Review

Comprehensive review of performance, key issues and recommendation for energy saving initiatives.

**Metering Requirements:** To benefit from profile alerts and profile optimisation services you will need effective half-hourly metering in place. If your meters do not meet the specification our metering operations team can help.
